1 The Problem

Our most valuable metadata is trapped

Teams
Discussions, meeting notes

Spreadsheets
Excel, CSV files

Slack
Conversations, shared files

Emails
Decisions, clarifications

Documents
PDF, PPT, Word, Notion, Wikis

Jira / Confluence
Requirements, design docs

Audio / Video
Meetings, webinars, training videos

Other Sources
Chat, tickets, intranet

Rich business knowledge exists but never reaches our metadata platforms.

2 What are Metadata Signals?

Valuable information about data hidden in everyday content

Source Content (raw)	Extracted Signal	Mapped to Data Asset (table/column)
"Inactive customer means no transaction for 90 days."	Definition of inactive customer	crm.customer. customer_status
"VIP customer = revenue > AED 100K (last 12 months)"	Business rule for VIP customer	sales.customer. customer_segment
"Use settled_amount for regulatory reports, not transaction_amount."	Reporting rule and preferred field	finance.payments. settled_amount
(In a recorded meeting) Explains what each KPI means	KPI definitions and formulas	finance.kpi.* (multiple columns)

3 The Gap

Metadata platforms don't see the full picture

What existing tools are good at (Technical Metadata)

- Schemas & data assets
- Lineage & dependencies
- Data quality & completeness
- Usage and query history
- Ownership & governance

+

What's missing (Business Knowledge)

- Business definitions
- SME knowledge & decisions
- Operational rules
- Terminology and synonyms
- Exceptions and special cases
- Context from real conversations

Both are needed for a complete enterprise context

4 Introducing MetaLens

Turn enterprise knowledge into metadata-ready signals

MetaLens

Capture. Understand. Enrich. Publish.

Complements your existing metadata platform

Works with OpenMetadata, Collibra, Atlan, Purview and others

5 How it Works

From a conversation to a trusted column description

1. Source Content

Teams meeting transcript

"Inactive customer means no transaction for 90 days. We use this for churn analysis."

2. AI Extraction

Extract key information

Concept: Inactive customer

Meaning: No transaction for 90 days

Type: Definition

3. Asset Mapping

Map to table/column

Table
crm.customer

Column
customer_status

Confidence
94%

4. Metadata Output

Publish to catalog

Description
Inactive customer means a customer who has not completed a transaction in the last 90 days.

Source: Teams meeting (12 Sep 2026)

6 Solution Architecture

Metadata Signal Intelligence Layer

7 Trust, Not Just AI Generation

Every metadata signal comes with evidence and confidence

Example: Generated Column Description

Column	customer_status
Description	Inactive customer means a customer who has not completed a transaction in the last 90 days.
Confidence	94%
Source	Teams meeting - Customer Review (12 Sep 2026)
Generated by	MetaLens (LLM)
Approved by	Data Steward
Version	1.0 (15 Sep 2026)

- Source evidence & provenance (with links)
- Confidence score
- Multiple signal corroboration
- Human review for critical metadata
- Version history
- Access control & security

8 The Result

A richer context layer for humans and AI

Metadata Platform

(OpenMetadata / Collibra / Atlan / Purview etc.)

Technical Metadata

(from existing capabilities)

- Schemas & lineage
- Data quality & completeness
- Usage & query history
- Ownership & governance

+

Knowledge-derived Metadata

(from MetaLens)

- Business definitions
- SME knowledge & decisions
- Operational rules
- Terminology & synonyms

Use Cases

Applicable across many domains and data types

Business Definitions

- Table/column descriptions
- KPI definitions and formulas
- Business glossary terms

Rules & Processe

- Calculation logic
- Data usage rules
- Reporting except

Domain Knowledge

- Industry terminology
- Product and customer context
- Data meaning from SMEs

Cross-functional K

- Decisions from me
- Clarifications from
- Context from docu

10

Next Steps

Start small, prove value, then scale

1. Pilot

- 1 domain (e.g., Sales or Finance)
- Connect 2–3 sources (Teams, Documents)
- Publish to OpenMetadata (or chosen tool)

2. Measure Impact

- Number of useful signals discovered
- Asset mapping accuracy
- Accepted descriptions
- Time saved for data stewards

3. Expand

- Add more sources (Slack, Audio/Video, Excel)
- Add more domains
- Support multiple metadata platforms

4. Long-term Vision

- Continuous enrichment
- Organization-wide coverage
- Power better analytics and AI use cases
